

SolarEdge Product Waiver Approval

Issue date: April 15, 2024

Dear installer,

Upon examining your waiver request, SolarEdge decided to approve it under the following conditions:

1. This approval is limited to installations done in Europe (including the UK) and the Caribbeans only.
2. This approval allows for the connection of S440 Power Optimizers with PV modules up to 490W and with Isc value of up to 15A.
3. The rest of the installation guidelines, Inverter and Power Optimizer's performance remain as stated in the SolarEdge specifications and installation documents.

SolarEdge approves that the design mentioned above, though exceeding the Power Optimizer the rated input DC power (490W vs 440W) and maximum short circuit current per input limit (15A vs. 14.5A), will not void the Power Optimizer or Inverter warranty.

The site must be connected to the SolarEdge monitoring.
